AUTHOR INDEX FOR VOLUME 106..... 521

NOTICE

The Subject Index for Volume 106 will appear in the December 1993 issue as part of a cumulative index for the year 1993.

Information for Authors

The *Journal of Solid State Chemistry* is a research journal devoted to the chemical, structural, thermodynamic, electronic, magnetic, and optical properties and processes of solids. Theoretical and experimental contributions are both welcome. Critical reviews are occasionally presented in selected rapidly developing fields. The journal also carries a Letters Section.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Solid State Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts may be presented as articles (i.e., conventional full-length expositions), or notes (brief rapid communications of important new work) which are limited to 1200 words. English, French, and German are the official languages of the Journal but submission of articles in English is encouraged. Manuscripts should be submitted to *Journal of Solid State Chemistry*, Editorial Office, Third Floor, 1250 Sixth Avenue, San Diego, California 92101.

Manuscripts should be submitted in quadruplicate—double-spaced on one side of 21.5 × 28 cm paper. Headings of major sections should be typed in capital letters and centered on the page. Each page of the manuscript should be numbered. Page one should consist of the manuscript title, the author's name, and the author's affiliation. For multiple authors, the author to whom correspondence is to be addressed should be indicated. Page two should consist of an abstract (50–150 words) suitable for use in *Chemical Abstracts*. The American Chemical Society's *Style Guide* or the *Style Manual* of the American Institute of Physics should be followed regarding matters of style and abbreviation.

Tables. Tables should be numbered with Roman numerals in a sequence corresponding to the order of citation in the text. Footnotes to tables are to be placed directly below the table and should be indicated by superscript, lowercase italic letters (^{a,b,c}). Tables longer than two manuscript pages should be submitted as clear, sharp glossy photographs. They will be reproduced by photoreproduction and should be designed to fit the Journal page after 50% reduction in each dimension. Errors in such tables cannot be corrected in proof.

Auxiliary Material. In lieu of publication, unusually long tables and sequences of repetitive figures must be deposited with the National Auxiliary Publications Service (NAPS).

For material to be deposited, a deposit fee of $25.00 for up to 98 pages of standard-size or 49 pages of oversize deposited material is to be paid by the authors to NAPS. Appropriate transmittal forms to accompany the deposited material are supplied to the authors by the Editor at the time a paper is accepted for publication. The following footnote (wherein missing numbers are to be inserted by the author in page proof) should be used to reference deposited material.

See NAPS document No. ___ for ___ pages of supplementary material. Order from ASIS/NAPS. Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10163. Remit in advance $4.00 for microfiche copy or for photocopy, $7.75 up to 20 pages plus $.30 for each additional page. All orders must be prepaid. Institutions and Organizations may order by purchase order. However, there is a billing and handling charge for this service of $15. Foreign orders add $4.50 for postage and handling, for the first 20 pages, and $1.00 for additional 10 pages of material, $1.50 for postage of any microfiche orders.

Figures. Figures should be submitted as glossy prints or as original black ink drawings, no larger than 21.5 × 28 cm. Press type is not acceptable. It is important that lettering on drawings be done with a lettering set and be planned to fit the proportion of the printed page. Lettering on the original should be large enough to be legible after reduction of the figure to single-column width. The difference in type size within a figure should be no more than approximately 15%. The caption of each axis should be lettered parallel to its axis. Background grids should not be included. For halftone reproductions, glossy, high-contrast, black and white prints should be submitted.

Illustrations in color can be accepted only if the authors defray the cost. Each figure should be identified on the back with the author's name and figure number. Figures are to be cited in the text by consecutive Arabic numerals. Figure captions should be typed as a list on a separate page.

Equations. Equations should be typewritten or clearly handwritten with an Arabic number if necessary for reference placed in parentheses to the right of equation. Reference to equations should use the form "Eq. (3)."

Footnotes. Footnotes to the text should be indicated by consecutive superscript numbers and listed on a separate page at the end of the paper.

References. References should be cited in the text by consecutive underlined numbers in parentheses. The references must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. After the reference number, the author's initials, last name, journal name, volume, initial page number, and year (in parentheses) should be listed in that order. Abbreviations for journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. For book references, give the author's name, name of book (in quotes), Editor's name (if any), edition (if other than the first), chapter or page number, publisher's name, place and year of publication.

Manuscripts Dealing Primarily with Single-Crystal Structure. The *abstract* should contain the chemical formula, crystal system, and space group (Hermann–Mauguin symbol), lattice constants with esd's, Z, and significant structural features.

The *experimental* section should contain the following information in as brief a form as possible: chemical formula, source of material and its color, lattice constants with esd's, wavelength of the radiation used in their calculation, temperature at which they were measured, type of filter or monochromator, possible space groups (and method of distinguishing between groups with the same absences), Z, crystal dimensions, absorption coefficient, method of correcting for absorption, type of data collection, number of reflections measured, number of independent reflections, and agreement factors between multiply measured or equivalent reflections. The description of the structure determination and refinement should indicate a brief outline of the method used, sources of f, $\Delta f'$, and $\Delta f''$, final R factors (weighted and unweighted), the function minimized in refinement, the form of weights in the refinement, and the extinction correction (if applied).

Structural results should contain a description of the structure and the following tables: a table of all atomic coordinates (with esd's) and important bond distances and angles (with esd's). In those structures where atomic displacements or atomic motion is important (ionic conductors, superlattice structures solved as a substructure, phase changes, etc.), it may be appropriate to add a table of anisotropic temperature factors. When submitting a manuscript three copies of a listing of h, k, l, F_o, F_c (σF_o is optional) must be provided for the reviewers and also, if not included in the manuscript, three copies of a table of temperature factors. Authors are strongly encouraged to deposit with NAPS structure factor tables, tables of anisotropic temperature factors, all nonessential bond distances and angles, and other supporting structural detail; such material will be retained in the *Journal's* editorial office for no longer than one year after publication of the article.

Letters to the Editor. Letters to the Editor will be accepted for publication subject to approval by the communicators, who upon their recommendation for acceptance will forward the manuscript directly to the Editorial Office. Each article should indicate clearly the novelty and urgency of the contribution; it may be helpful to document this more explicitly in an accompanying letter of transmittal. Each communicator must satisfy himself that the content is not only scientifically sound, but also likely to have such impact as to merit rapid publication. Accepted manuscripts will be published on an accelerated publication schedule. The author will not receive proofs for correction; it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. Letters should be no longer than 1200 words, with an absolute minimum of figures, tables, and references; an abstract not exceeding 150 words should also be provided. Manuscripts should be sent to the Editor, an Associate Editor, or to one of the following members of the Editorial Advisory Board: E. F. Bertaut, J. B. Goodenough, P. Hagenmuller, C. N. R. Rao, or A. Wold. Full addresses for these Board members are listed on the inside front cover of the journal.

Book Reviews. Book Reviews are published on an irregular schedule, and are limited to books whose content bears directly on the general area of solid state chemistry. Reviews should be submitted directly to the Editor for Book Reviews, Dr. Edward Kostiner, Department of Chemistry and Institute of Materials Science, University of Connecticut, Storrs, Connecticut 06268.

Proofs. Unfolioed page proofs will be sent directly to the author from the printer together with order forms for reprints. There is no page charge.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Solid State Chemistry* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101; telephone: (619) 699-6415; fax: (619) 699-6800).

An International Journal Designed for the Diverse Community of Users and Developers of Novel X-Ray Imaging and Analysis Techniques

Journal of X-Ray Science and Technology

Editor-in-Chief
Larry Knight
Brigham Young University, Provo, Utah

The **Journal of X-Ray Science and Technology** is designed to provide scientists and engineers with a single literature source covering new developments in the field of x-ray imaging and analysis techniques. Reports of original research and timely reviews of the best technical and esthetic quality will be published.

Research Areas Include

- Applications: analytical, nondestructive testing, microelectronics, biological/medical imaging, x-ray astronomy, materials and surface science
- Interaction of x rays with matter: x-ray phenomena and optical constants
- Sources: synchrotron-generated x rays, x-ray lasers, laser-produced plasmas, novel solid sources
- Optical elements: grazing incidence optics, multilayer mirrors, zone plates, gratings
- Optical instruments: interferometers, spectrometers, microscopes, telescopes, microprobes
- Detectors: CCD arrays, position-sensitive detectors
- Signal processing: coded imaging, tomography
- Related topics and future trends

Volume 4 (1993), 4 issues
In the U.S.A. and Canada: $110.00
ISSN 0895-3996
All other countries: $123.00

Manuscripts may be submitted in quadruplicate to:
JOURNAL OF X-RAY SCIENCE AND TECHNOLOGY
Editorial Office
1250 Sixth Avenue, San Diego, CA 92101

Sample copies and privileged personal rates are available upon request. For more information, please write or call:

ACADEMIC PRESS, INC., Journal Promotion Department
1250 Sixth Avenue, San Diego, CA 92101, U.S.A.
(619) 699-6742

All prices are in U.S. dollars and are subject to change without notice. Canadian customers: Please add 7% Goods and Services Tax to your order.
